

P³ Portable Power Pack - Power: Where and When You Need It

The P³ Portable Power Pack by Fourwinds Enterprises, Inc., provides 100 amp hours of power and comes in a rugged, rolling, go-anywhere case. It's made for tough applications, easy maintenance and simple use.

Fourwinds P³ Portable Power Packs provide 100 Amp Hours of power anywhere you need it. This rugged and versatile system is easily charged and always ready. Connect it to an optional solar array and forget about the constraints of grid power.

What can P³ be used for?

It's perfect for powering remote equipment, like surveillance cameras, emergency lights, radios, a small TV set, trolling motor, power tools or coolers. It's handy on the farm to jump start equipment or provide power in those strange places that always seem to need it. Want a small heater in your duck blind? The P³ will power it and keep your feet warm all day. So, the flight line always needs a jump start? P³ rolls to the rescue! Campers can finally keep cell phones, laptops, flashlights and other devices charged. Add the optional solar array and you can keep your P³ going strong all day.

Built to serve—Built to last

P³ is built to military and marine grade standards. This means that all wire is tinned (won't corrode in damp, salt-air conditions) and it is designed

and manufactured with the best grade stainless steel fittings and components. All electrical connections are secured to Blue Loctite™ standards. Thru-fittings are silicone sealed. Outlets are individually wired, not daisy chained, to ensure dependability. Beat it up, it doesn't care!

The rugged P system comes in a rolling Pelican™ Case. Choose AC or DC power, up to 50 amps. Lift the control panel for easy battery access. Combine it with optional solar panels for extended use.

Other Fourwinds Solutions

- Portable Water Purification Systems
